This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of the Fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is a risk free investment.

This share class has been classed as 4 because its volatility has been measured as average.

The risk and reward score is not guaranteed and may change over time. The risk and reward indicator does not take into account the following risks:

- The Fund may invest in higher risk bonds which have a greater risk of default than lower risk bonds.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this Fund.
- The use of derivatives may result in the Fund being leveraged whereby the exposure of the Fund as a result of all positions held by it may exceed its Net Asset Value and may result in gains or losses that are greater than the original amount invested.
- The Fund is suitable for investors with a medium to long term holding period and who have a moderate to high risk appetite.
- There can be no assurance that the investment objective and policy of the Fund will be achieved.
