What are the risks and what could I get in return?

Risk Indicator

The risk indicator assumes you keep the product for 5 years.
The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the ability for you to receive a positive return on your investment.

Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other key material risks not captured by the risk indicator that could potentially impact the Fund are disclosed in the Prospectus.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Performance scenarios

The figures shown include all the costs of the product itself, but do not take into account your personal tax situation and may not include all the costs that you pay to your advisor or distributor, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations of what you might get back using the worst, average, and best performance of the product / a suitable benchmark over the last 10 years. Markets could develop very differently in the future.

The stress scenario shows what you might get back in extreme market circumstances.

What happens if the Manager is unable to pay out?

The Manager is responsible for administration and management of the ICAV and does not typically hold assets of the Fund (assets that can be held by depositary are, in line with applicable regulations, held with a depositary in its custody network). The Manager and the Investment Manager have no obligation to pay out since the Fund's design does not contemplate any such payment being made. However, investors may suffer loss if the ICAV or the depositary is unable to pay out. There is no public or private investor compensation scheme that can compensate for any losses due to the insolvency of the ICAV, the Manager and the Investment Manager.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.
